TEST COMMENTS:

This was a uniform location planted in very nice soil conditions. Even emergence and good vegetative growth were seen throughout this plot. Most varieties had long internodes and nice pod sets. The top six inches of most plants had two pods while below that there were three. Large seed size was noted, most likely from swell due to a little extra moisture. Like most of the area, soybean harvest is behind due to weather delays. However, this was a very nice location as a whole.
